CARBON M is the family of Carbon Fiber Monopods that aims to differentiate itself from the market, both from an aesthetic and functional point of view. Produced only with CNC technology from extruded aluminum alloys and high modulus carbon fiber tubes.

All CARBON M models are characterized by:

- Airtight sections, you will no longer have to worry about spare parts or cleaning the inside of the leg, the sections are in fact equipped with highly resistant and infinitely durable seals.
- Soft telescopic smoothness with "pump" effect.
- Instant locking of the sections: forget the old locking systems of the sections, once you have tested this locking you will never do without it and it will seem strange and inconvenient to go back, this locking in fact automatically locks all the sections by rotating the last section and If necessary, you can tighten the different sections using the appropriate high-grip ergonomic rubber pads.
- Removable feet.
- Stainless Steel screws.
